The Liverpool Declaration stated that:

European Countries should reduce the risk of visual impairment due to diabetic retinopathy by 2010 through:

- systematic programmes of screening reaching at least 80% of the population with diabetes
- using trained professionals and personnel
- universal access to laser therapy

Aims of the meeting:

To report on progress so far.
To focus on the impact of new technology on screening and management of diabetic retinopathy.

Organising committee:
Deborah Broadbent (Liverpool), Simon Harding (Liverpool), Yvonne D’Souza (Manchester), Tunde Peto (London).

Delegates:
National representatives from all European Countries.
Members of the organising committees from 2005, 2008 and 2011 conferences.
General registration will open for EASDec delegates at a later date depending on space.

Topics:
Automated grading; telemedicine and portable imaging hardware; home monitoring; automated grading; the use of widefield imaging and optical coherence tomography; new therapies; and links to systemic diabetes care.

National Representatives:
A structured statement on current status will be required from each country.

We encourage colleagues who attend this satellite to join us for the full EASDec programme which is available at www.easdec.org
22nd January 2016
